TECHNOLOGY CENTER

DRIVER TRAINING SIMULATOR

Autry Technology Center's driver simulator puts drivers into dangerous driving situations without putting anyone in danger. By having the choice of over 140 transmissions, 240 engines and 33 axle ratios, the training unit gives the feel of nearly any type of vehicle. The mobile training unit offers the ideal training—real-world scenarios like avoiding pedestrians or animals crossing the road or safely navigating through traffic when other drivers fail to stop for stop signs, red lights or emergency signals. The simulator can also incorporate night driving or a variety of weather challenges, from rain and sleet to snow and ice.

DESIGNED TO

- Reduce preventable accidents
- Lower fuel costs
- Increase fuel efficiency
- Reduce equipment maintenance
- Increase driver retention
- Improve decision-making skills
- Enhance company image
- Reduce insurance costs by reducing liability exposure

EMPLOYEES TRAINED

- At your business
- In Autry Technology Center's Mobile Training Solution
- On your time schedule – day, night or weekends

PROVEN CURRICULUM

- Circles of influence
- Space management
- Speed management
- Fuel management
- Adverse conditions
- Emergency maneuvers
- Shifting techniques
- Immediate and detailed

ADDITIONAL TRAINING

- Backing procedures
- Intersection analysis situations
- Urban driving situations
- Steering exercises
- Day and night conditions
- Up and down grade handling
- Off road surfaces – varying terrain types
